Founder @MeliusAI | Standardizing Technical Hiring Through
Verified Code Quality
Hisar, Haryana, India

Summary

I'm a student builder and developer who got tired of seeing how traditional tech hiring works. A PDF resume can list buzzwords, but it rarely shows how cleanly someone actually codes, structures their apps, or solves real architectural problems. To bridge this gap, we engineered a solution at MeliusAI (meliusai.in). As the Founder and Product Architect, I designed the system to act as an AI-powered project auditor and skill verification platform. The engine allows developers to drop in their code files or frontend assets and get instant, AI-driven audits on their structure, layout bugs, and security vulnerabilities. My goal with MeliusAI is to let our actual code do the talking and connect true talent with real opportunities. When I'm not architecting MeliusAI or studying, I'm usually experimenting with new frameworks, learning about AI integrations, or exploring game mechanics. I'm always open to feedback on our platform, chatting about clean architecture, or connecting with fellow builders. Feel free to drop me a DM!

Experience

MeliusAI

Founder & Product Architect

June 2026 - Present (3 months)

Hisar

Architecting an AI-powered project auditing and skill verification platform to help developers bypass traditional resume filtering by analyzing code quality, design structure, and layout bugs.

Education

OP Jindal Modern School
